

WHAT TO DO IF A CARRIER IS ADDED IN ERROR

The Modify Carrier Key function may be used to change a Carrier Key, for example *If the Carrier was entered as 60h but this key should be 60H, you would go into modrkey and follow the screen prompts.*

But if the Carrier is not required you may need to delete the record – NB only a newly created Carrier can be deleted in this way.

- ◆ Log into TRANSPAC
- ◆ Select the 'TRANSPAC System' menu and then the 'Carrier' menu.
- ◆ From the 'Carrier' menu select 'Radio Number Maintenance' or at the 'SELECTION:' prompt, type:
drivlink <enter>
- ◆ Select **D** for delete and enter **only** the carrier number. For example, if the carrier's key is *60h*, then enter:
60 <enter>
and you will see the driver's key displayed. Delete this record by entering **Y** at the delete prompt.
- ◆ When the '*drivlink*' record has been deleted, return to the menu and select 'Details Maintenance' or, at the 'SELECTION:' prompt, type:
driver <enter>

Select **D** for delete and enter the carrier's key. The record will then be displayed on screen. Delete this record by entering **Y** at the delete prompt.
