## Sigtec Commissions Major Upgrade For Courier Operation

Sigtec is proud to announce that it has successfully completed the commissioning of a major system upgrade for existing client Fasta Couriers in Perth, Western Australia.

The new Sigtec mobile data system provides Fasta Couriers with some major advances in performance and functionality. The equipment in the vehicle includes Sigtec's proven D8268 Mobile Data Terminals with GPS tracking. At the base Sigtec has installed its new MAP JDM™ software, which provides vehicle-tracking functionality, a rugged communications gateway over the radio network, and a dispatch interface to the existing TRANSPAC™ application by Software Integrators.

**Sigtec's proven D8268 Mobile Data Terminal  
With EPIK Communications and GPS tracking**

Sigtec's MAP JDM™ allows Fasta Couriers to trace the path of its vehicles on an on-screen map using GPS. The application provides real-time tracking to the second, with each vehicle reporting its position at least once for every 1 km of distance travelled. Of course this is all configurable. The system also records the vehicle's speed, heading and location into an SQL database that allows for efficient data retrieval,

log play back and customised reporting. Mike Skuba Managing Director of Fasta Couriers is delighted with the system. ***"We can tell immediately where all our vehicles are and where they are headed. The system is already a much-relied on tool by our booking operators."***

The integration with Software Integrators TRANSPAC™ package provides a sophisticated and powerful solution to Fasta Couriers. The integration includes job and data messaging while also feeding GPS information directly into the TRANSPAC™ software's "Recommended Carrier" application. The Transpac software is then able to automatically suggest the most suitable vehicle for the job.

**Map JDM™ Operator Workstation**

In addition to offering better customer service, efficiency of the carrier fleet is greatly increased with a corresponding increase in earning capacity for individual carriers. Mike Skuba feels strongly about the benefits, ***"The integration of the Sigtec solution to the TRANSPAC software has added a whole new dimension to our dispatch. We have not only improved the efficiency of our operations but also the customer response time. The system has also allowed us to help our drivers by reducing their unpaid travel time and fuel costs. We are extremely pleased with the results."***

The Fasta Couriers upgrade reinforces Sigtec's market position as the leading solution provider to the courier industry with a proven integration to the Software Integrators TRANSPAC™ package. The new system will ensure Fasta couriers can maintain its leading position now and into the future.
